5 Ways Businesses Can Beat the Winter Peak

Avoid higher costs during our winter peak hours, which are 6-9 a.m. beginning November 1. Smart energy habits can help your business manage demand and avoid costly surprises:

1. **Shift Major Loads:** During peak hours, shift major loads earlier or later to cut costs.
2. **Avoid the Heat Strip Spike:** Electric strips can raise your bill quickly. Avoid using them when possible.
3. **Preheat Smartly:** Warm your space before 5 a.m. to stay comfortable and avoid costly morning peaks.
4. **Take Control:** Smart thermostats and timers can stagger loads and reduce demand (and stress!) during peak hours.
5. **Stay Cozy:** Insulation and maintenance help lower heating needs and keep bills steady.
