

HEAT PUMP TIPS AND REBATES

Most of your electric costs come from heating and cooling your home. Stay energy efficient by:

- Tuning up your heat pump.
- Using fans in the room you're in.
- Pre-cooling your home before Peak Hours (3 p.m. to 6 p.m.).
- Regularly changing your filters.

You can receive a **rebate of up to \$700*** when you replace your heat pump with a more energy-efficient model.

**Qualifications apply.*
