

## 2023 PROSPECTIVE PRODUCT CONTENT LABEL<sup>1</sup>

Green Power is sold in blocks of 100 kilowatt hours (kWh). In 2022, Green Power will be made up of the following new renewable resources averaged annually.

### Green-e Energy Certified New<sup>2</sup> Renewables in Green Power 2022

### Generation Location

		Generation Location
Landfill Methane Gas	> 44%	South Carolina
Solar	< 55%	South Carolina
Wind	< 1%	South Carolina
<b>TOTAL</b>	<b>100%</b>	

<sup>1</sup> These figures reflect the renewables that we have contracted to provide. Actual figures may vary according to resource availability. We will annually report to you before August 1 of the next year in the form of a Historic Product Content Label the actual resource mix of the electricity you purchased.

<sup>2</sup> New Renewables come from generation facilities that first began commercial operation within the past 15 years. This product includes generation from a facility that is approved for extended use by Green-e Energy.

For comparison, the current average mix of resources supplying Santee Cooper includes: Coal 41%, Nuclear 9%, Oil - 0.0%, Natural Gas 20%, Hydro 2%, Methane 0.0%, Solar 0.0%, and Other 27%. (Source: 2021 Santee Cooper actual generation data)

The average home in South Carolina uses 1,078 kWh per month. (Source: Energy Information Administration 2021)

February 6, 2023

---

Thank you for being a Green Power customer. Have you ever wondered what “ingredients” are used to generate electricity?

The Prospective Product Content Label on the back of this card shows the fuel mix that Santee Cooper plans to provide to our customers during 2023.

Each year, Santee Cooper’s fuel mix changes due to weather, fuel costs, system load requirements and new generation stations brought on line. Santee Cooper’s fuel mix includes coal, nuclear, hydro, natural gas, oil, methane gas, solar and other.
